New anti-allergic drugs developed

The Institute conducts comprehensive experimental studies of the properties of plant substances at the systemic and cellular levels. Together with academic institutes, more than 80 domestic preparations based on local raw materials were developed and studied.

For the first time in Uzbekistan, a domestic anti-allergic drug “Allergodaf” was developed, isolated from the flavonoid fraction of a succession extract obtained from local raw materials. A new immunomodulatory drug of the tablet, “Immunocor,” based on polysaccharides of a series of tripartite from local raw materials, has been developed.
