

# "Matematik statistikaning tadbiqiy usullari" mavzusida master-class mashg'ulotlari

O'zR FA Matematika instituti, Toshkent shahridagi Moskva davlat universiteti filiali hamda Mirzo Ulug'bek nomidagi O'zbekiston Milliy universiteti hamkorlikda "Matematik statistikaning tadbiqiy usullari" mavzusida master-class mashg'ulotlari o'tkazildi. Unda professor A.A.Abdushukurov va dotsent N.S. Nurmuxamedovalar "Guruhlarni solishtirish: dispersion tahlil usuli (ANOVA)" mavzusida ma'ruza qildilar.

The screenshot shows a Zoom meeting interface. On the left, a large video window displays Professor A.A. Abdushukurov. At the top, a gallery of smaller video windows shows other participants. The main content is a presentation slide titled "Боғлиқсиз ва жуфт танланмалар" (Independent and paired samples). The slide contains a flowchart: "I Бош тўплам" (Group I) and "II Бош тўплам" (Group II) lead to "Тасодифий танлов" (Random sampling), which then leads to "I Танланма" (Sample I) and "II Танланма" (Sample II). A double-headed arrow labeled "Солishtirish" (Comparison) connects the two samples. The name "Nurmuxamedova" is visible in the participant list on the right.

Unda oliy ta'lim muassasalari o'qituvchi-professorlari, talabalar va yosh tadqiqotchilar ishtirok etdi va ushbu mavzu doirasida o'zaro fikr almashdilar.
